**Fig. S5.** Pairwise sequence alignment between the  $\alpha$ -subunit of the predicted sodium-translocating decarboxylating oxidoreductase from *Thermotoga maritima* and its experimentally studied homolog from *Methanobacterium thermoautotrophicum*. The pairwise sequence alignment was built using the Needle program with standard parameters.

**Fig. S6.** Genomic neighborhoods of the genes of  $\beta$ - and  $\gamma$ -subunits of  $\alpha$ -ketoacid:ferredoxin oxidoreductases in Thermotogae. The  $\beta$ -subunit genes (COG0674) are colored orange, and the  $\gamma$ -subunit genes (COG1014) are colored pale green. Genomic neighborhoods do not contain the genes of corresponding  $\alpha$ -subunits and seem to be random.
